

Adjustable Non Concussive Basin Taps

inta adjustable taps intergrating non-concussive operation with a anti-block feature

Introduction

The new Inta adjustable flow time basin mounted non concussive tap offers users complete control when installing and operating by enabling the ability to reduce and extend the flow run time. With its anti-block feature built in as standard this allows for the water flow to stop even if the push button is held in the pressed position, this helps to maintain our method of preventing misuse and water wastage.
